Lucy, you got some 'splainin to do

WITH CHRIS RUPE

Tuesday, October 21, 2025, at 7:00 pm

Since the 1970s, the famous "Lucy" skeleton and the species she is believed to represent have been promoted to the world as a credible evolutionary transitional species. Chris presents an alternative view that better aligns with the fossil evidence. Other fossils attributed to Lucy's species, *Australopithecus afarensis*, are examined, including several misclassified human bones. Granting for the sake of argument that the dating methods are reliable, these true human fossils falsify the evolutionary ape-to-man model since they pre-date the reputed origin of the human genus *Homo*. Toward the end of the presentation, Chris shares a simpler biblical model that better explains the hominin fossil record.
